Summary

- Homeless surveys were mailed to 132 agencies in Alaska and 64 were returned
- Seventy-one percent of the households reported by agencies were in Anchorage.
- Eighty-one percent of the homeless reported were adults - the remaining 19% were youth, either individuals or with families.
- Family household members comprise close to 50% of the total number of homeless reported when all household members are counted.
- The percentage of homeless with a disability stayed at 30%. The most prevalent disability was mental illness - 18% of the homeless reported.
- Chronic homeless (see insert in report) represent approximately 4% of the cases reported in Anchorage and Rest of State.
- Thirty-three percent of the homeless disclosed a substance abuse problem
- The percentage of female homeless grew from 38% in the Winter 2002 survey to 40% in the Winter 2003 survey.
- African-Americans individuals and families represent 9% of the homeless reported compared to 4% for Alaska's population
- Alaska Native/American Indian individuals and families represent 39% of the homeless reported compared to 17% for Alaska's population.

Draft 5-20-2003

Introduction

The Homeless Service Providers Survey is a “*point-in-time enumeration*” completed by service providers semiannually on a predetermined day. The purpose of the survey is to gather demographic information on the homeless who receive services from particular homeless agencies at “any given point in time.”

The Homeless Service Providers Survey defines homelessness based on standard established by the Department of Housing and Urban Development and the Alaska Housing Finance Corporation. For the purposes of this survey, the definition of “homeless” includes:

- *Any individual who lacks a fixed, regular, and adequate nighttime residence or has a primary nighttime residence in any facility not designed for permanent living.*
- *Families, individuals, and youth residing in emergency shelter or transitional housing.*
- *Persons in drug and alcohol treatment who were homeless before they entered treatment or will be homeless after they leave treatment.*
- *Family members wait-listed for public housing that are currently residing in substandard or overcrowded housing.*
- *Individuals discharged from correctional institutions within 30 days of the survey date that would meet the definition of being homeless.*

Limitations

Please note that homeless surveys attempt to define a segment of the population that is dynamic and not easily identified or understood. There are many factors that generally limit the validity of such studies. Users of homeless surveys need to carefully examine the work done and consider the following limitations of all homeless research. **The results of the survey are not intended to represent the entire homeless population and the reader is cautioned against making such generalizations.** Please note that the results of this survey, as well as other homeless surveys, are generally limited by a variety of factors including:

1) Self-report:

Homeless surveys depend on self-disclosure and assume that people understand what it means to be homeless and furthermore, that people are comfortable in reporting self-characteristics that may be perceived as socially undesirable, such as mental illness or substance abuse.

2) Overestimation

Homeless surveys can overcount the number of homeless seeking services by not considering or controlling for duplication within and across agencies. This survey attempts to control for overestimation by removing, when possible, duplicates. Duplicates are identified using social security number, client name, community, age, and gender. When these variables are incomplete or not available, additional variables may be used to identify duplicates.

3) Generalizing to the Entire Homeless Population

Homeless surveys often attempt to make generalizations about the entire population from limited samples of shelters and food kitchens. It is important to note that homeless may also be found in motels, libraries, cars, parks, or other nontraditional locations.

4) Rural Factors

It is important to point out that there are pronounced differences between urban and rural areas when it comes to homelessness. While urban communities often have shelters, day centers, and food kitchens for the homeless, rural communities may lack these facilities. The absence of these facilities can result in reports which may incorrectly conclude that rural areas do not have a homeless problem. A rural community often relies on non-traditional shelter arrangements to take care of the homeless. Many persons in rural areas without a home may board with friends or relatives in substandard or overcrowded housing.

Method

Data Collection

Twice a year, surveys are mailed to 138 homeless agencies throughout the State of Alaska. Agencies are asked to report on the demographics on all the homeless families and individuals who request services on the date of the survey, including those who are ineligible to receive services and those who cannot be served because of capacity issues. For the past two years, the survey has been administered on the last Wednesday of July and January. Note that in some cases, agencies submit homeless client data not collected on the required survey dates. These data are generally not included with the results of the survey unless it can be concluded with a reasonable amount of certainty that the cases reported were homeless on the required survey dates. Agencies may also submit client data where there is some question as to whether or not the reported individuals or families are actually homeless. In these circumstances, agencies are contacted to clarify if the cases meet the survey's definition of homeless.

Data Analysis

Data gathered from homeless agencies are entered into a database and subjected to a missing case and duplicate analysis. **Missing cases are generally excluded from demographic trends and patterns reported in this report. Duplicates across homeless agencies for the specific survey are excluded** and also excluded from the trends and patterns reported in this survey. However, duplicates with prior surveys are included and analyzed to identify the differences between infrequent users of homeless services vs. frequent users.

Data collected over the last seven years indicate fundamental differences between Winter and Summer surveys with respect to agency participation and the demographics of the homeless reported. Because of these factors, Winter survey trends are derived only from Winter survey data whereas Summer survey trends are derived only from Summer survey data.

The constantly changing nature of homeless agency participation in the Homeless Service Providers' Survey results in demographic statistics that are extremely variable. This is especially the case in rural Alaska where just one agency can significantly change the demographic profile of the homeless. Because of this, percentages are calculated by averaging all available data points. This approach, a moving average, provide a clearer picture of the long-term trends in the homeless population from which inferences can be made.

“Chronic Homeless”

The Department of Housing and Urban Development has recently focused attention toward the chronic homeless. HUD has defined a chronically homeless person as, “an unaccompanied homeless individual with a disabling condition who has either been 1) continuously homeless for a year or more or 2) has had at least four episodes of homelessness in the past three years.”

In this year’s survey results, an attempt is made to identify the “chronic homeless.” It should be noted, however, that the Homeless Service Provider’s Survey is a point-in-time survey and may not adequately address whether a person has been continuously homeless for a year or more. However, given the persistent, long-term nature of chronic homelessness, the probability that a person is homeless six months after appearing in a survey appears reasonably high.

A relatively small percentage of the cases reported, 4%, met the definition of “chronic homeless” – 3% in Anchorage, 4% in Rest of State. This is considerably lower than national figures which estimate that close to 20% of the homeless meet this definition. However, 15% of the total cases reported in the survey lacked data sufficient to determine if they might meet the “chronic” definition. As better data is collected in subsequent surveys, the percentage of chronic homeless may likely increase.

Draft 5-20-2003

Trends

Increasing Participation Pushes Number of Homeless Up

The total number of homeless reported by participating agencies has increased over the last eight years, from a moving average of 883 cases in the Winter-1995 survey to 1,425 in the Winter-2003 survey. The addition of new agencies over the last eight years has accounted for approximately 229 of these cases. The remaining increase in homeless, 313, was reported by agencies that participated in the survey since Winter 1995. While this increase may reflect a growing homeless population, it may also reflect an increase in agency capacity to serve the homeless.

Of the 78 agencies that have consistently participated in the homeless survey over the last eight years, 9 agencies reported a decrease, 9 recorded no change and 60 reported an increase. Of those agencies that recorded an increase, the number of homeless they served grew an average of 5.

Statewide Homeless Reported By Agencies

New vs. Participating Agencies

January 1995 through January 2003

Trends

Homeless Reported Grow Faster than State's Population

The reported rates of homeless in this survey are increasing at a rate that is substantially higher than Alaska's population growth. Excluding cases from new agencies over the last eight years, the percentage of homeless reported has grown by approximately 35%. This rate of growth is higher than Alaska's population which grew 9%.

One common explanation often used when attempting to explain increases in the homeless population is in-migration. In the 80's and early 90's Alaska's had a powerful draw on outside labor. This does not generally appear to be the case over the last five years as Alaska continues to experience negative net-migration and the percentage of homeless reporting residence outside Alaska during the last six months continues to drop. Less than 6% of the homeless in the surveys report residence outside of Alaska in the last six months.

Percentage Change in Homeless Cases Reported From Outside Alaska vs. State Net-Migration

January 1995 through January 2003

Draft 5-20-2003

Trends

Housing and Case Management Agencies Record Increases in Homeless, Particularly Families

At an agency level, providers of housing, case management, or other homeless services recorded the largest increases in homeless served. From Winter-1995 to Winter-2003, the percentage of cases reported by emergency shelters, day centers, food kitchens, or transitional facilities dropped from 87% to 34% while those from housing providers and other agencies grew from 13% to 67%. A large part of this change has occurred as a result of including AHFC and regional housing authority wait list date starting in 2000. In many rural areas of the State, households that would otherwise be homeless in Anchorage are doubled up, in substandard housing, or living with relatives. While some of these households might not meet HUD's definition of homeless, they may meet AHFC's definition.

Statewide Homeless Reported By Agency Type

Percentage of Cases Reported

January 1995 through January 2003

Trends

The representation of families among the homeless has increased along with the number of participating housing and case management agencies. In the Winter 1995 Homeless Service Providers' Survey, 29% of the total cases reported, including all family members, were represented in family households. The most recent survey, Winter 2003, recorded close to 49% of the same cases in family households. Alaska's homeless providers, particularly in the Municipality of Anchorage have linked this increase to an increasing number of "working-poor" families. The rising cost of housing, health care, and food are placing greater pressure on families whose household earnings cannot keep pace.

Individuals vs. Family Members

Percentage of Cases Reported By Agencies

January 1995 through January 2003

Draft 5-20-2003

Trends

African-American and Alaska Native/American Indian households overrepresented among homeless.

The Homeless Service Providers survey points to an over-representation of African-American and Alaska Native/American Indian households among the homeless population over the last eight years. African-American households represent approximately 4% of Alaska's population, but 9% of the homeless. Alaska Native/American Indian Households represent 39% of the homeless, but only 19% of the general population.

The over-representation of African-American and Alaska Native/American Indian appears related to lack of income. According to the Census Bureau, in Alaska, 6% of white persons live below the poverty level, while over 20% of Alaska Native and 10% of African-American persons live below the poverty level. Given the additional hardships these ethnic groups face due to poverty, (e.g. finding employment, paying for shelter), they are at greater risk of becoming homelessness.

Homeless By Race

Percentage of Cases Reported By Agencies

January 2003

Trends

Higher Percentage of Homeless With Mental Illness In Anchorage

Anchorage providers have recorded a steady rise in the percentage of homeless with mental illness assisted over the last eight years. The percentage has risen from 8.4% in the Winter 1995 survey to 16% in the Winter 2003 survey. The majority of this increase has occurred through the local community mental health center – 60% of the total growth in homeless with mental illness.

Despite the increase, the percentage of homeless with mental illness may actually be much higher than the reported 16%. Approximately 19% of the cases in Anchorage lacked sufficient data to identify if the householder had a mental illness.

Notes:

- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
- Cases for which demographic variable is unknown, excluded from percentage calculations.
- Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
- Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
- Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.
- Includes Winter Surveys Only
- Chronic Homeless - Persons with a disability who are reported homeless in four or more surveys over last three years, or homeless over two consecutive surveys, including current survey.

Notes:

- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
- Cases for which demographic variable is unknown, excluded from percentage calculations.
- Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
- Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
- Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.
- Includes Winter Surveys Only
- Chronic Homeless - Persons with a disability who are reported homeless in four or more surveys over last three years, or homeless over two consecutive surveys, including current survey.

- Notes:
- Refers to the change due to participation caused by: 1) An agency participating in last seasonal survey, but not current survey or 2) Change due to an agency not participating in last seasonal survey, but participating in current survey
 - Cases for which demographic variable is unknown, excluded from percentage calculations.
 - Refers to cases lost due to an agency participating in last seasonal survey, but not current survey
 - Refers to cases gained due to an agency not participating in last seasonal survey, but participating in current survey
 - Refers to the total sum of household size, may overestimate homeless because homeless members of a household may be counted more than once. Without individual demographic data on each household member, duplicates cannot be ruled out.
 - Includes Winter Surveys Only
 - Chronic Homeless - Persons with a disability who are reported homeless in four or more surveys over last three years, or homeless over two consecutive surveys, including current survey.
